# Fresh air automatically.

## » TROCAL REGEL-air® 76.

**Correct, regular airing is becoming more important than ever, especially in face of the growing effectiveness provided by insulation in living space.**

**When there is too little ventilation the relative air humidity rises constantly, quickly giving rise to a damp indoor climate that promotes the growth of mould.**

For this reason it is important that a healthy balance is reached between a sensible ventilation behaviour and the minimum heat loss. Fitted with a double-stage wind pressure regulator, REGEL-air® 76 provides a uniform supply of fresh air inside closed windows and is easy to clean. The new REGEL-air® 76 fan features an innovative return spring and does not need a power supply. It can be installed either horizontally over the window or vertically next to it. The system is therefore ideal as a retrofit.

- Constant, uniform supply of fresh air.
- Minimises high air humidity and the risk of mould.
- Simple retrofit.
- Concealed in the outer frame rebate, so invisible from the inside and outside when the window is closed.
- Easy to clean.
- Tested sound insulation up to 43 dB (STC 4).
- Tightness against driving rain and air passage in accordance with DIN and EU standards.
- DIN 1946-6 ventilation.
